

***Advanced
Combative Exo
(ACE) Suit Mk1***

SHOCK & AWE INC.

Always Acting. Always Innovating. Always Forward.

Who are we?

- A defense-tech leader specializing in next-generation Advanced Combative Exo (ACE) Suit designed to augment the physical capabilities of the modern warfighter.
- **Target Audience:** US Armed Forces, tactical logistics units, and military medical recovery teams.

SHOCK & AWE INC.

Always Acting. Always Innovating. Always Forward.

Advanced Combative Exo (ACE) Suit: Mk 1

- **Integrated Ballistic Protection:** Built in chest rig to neutralize high-velocity projectiles and shrapnel
- **Load Distribution System:** Transfers 80% of pack weight to suit frame. Reduces operator fatigue for prolonged operations.
- **Active Power Management:** High-density modular cells for 24-hour operational usage without recharging.
- **Multi-Environmental Seals:** Engineered against sand, mud, water for maximum user efficiency

Advanced Combative Exo (ACE) Suit: (Mk) 1

- **Haptic Feedback Sensors:** Real-time spatial awareness cues to operator in low-visibility environments.
- **Universal tool integration:** Standardized rail systems on forearms for ease of mounting tools, comms devices, and breaching tools.
- **Fail-safe countermeasures:** Mechanical joints remain unlocked, even during power losses. Prevents operator entrapment in field.

Advanced Combative Exo (ACE) Suit: Marketing

- Social media campaign targeting active-duty military and government contractors
- Show the capability of the exosuit under testing and live simulations
- Magazine and other tech journalists will be given exclusive access to early stage testing

The World's Metal Man

Prompts

3D Cross section render:

Create a high-quality, realistic 3D render of exactly one instance of the object: [Military exoskeleton from advanced warfare].

The object must float freely in mid-air and be gently tilted and rotated in 3D space (not front-facing).

Use a soft, minimalist dark background in a clean 1080×1080 composition.

Left Half — Full Realism

The left half of the object should appear exactly as it looks in real life

— accurate materials, colors, textures, reflections, and proportions.

This half must be completely opaque with no transparency and no wireframe overlay.

No soft transition, no fading, no blending.

Right Half — Hard Cut Wireframe Interior

The right half must switch cleanly to a wireframe interior diagram.

The boundary between the two halves must be a perfectly vertical, perfectly sharp, crisp cut line, stretching straight from the top edge to the bottom edge of the object.

No diagonal edges, no curved slicing, no gradient.

The wireframe must use only two line colors:

Primary: white (≈80% of all lines)

Secondary: a color sampled from the dominant color of the realistic half (<20% of lines)

The wireframe lines must be thin, precise, aligned, and engineering-style.

Every wireframe component must perfectly match the geometry of the object.

Strict Single-Object Rule

Render only ONE object in the entire frame. Render only one physical object.

Do NOT show a second object from any angle. Do NOT show a second object as a reflection, shadow, silhouette, outline, ghost image, or transparency. Do NOT show a second object for comparison or display purposes. Do NOT show both the front and the back separately.

Do NOT show an extra device behind, beside, underneath, or partially hidden.

Only one single object is allowed in the entire frame.

No duplicate objects, no mirrored back-and-front pairings, no reflections showing a second object.

The object must appear alone, floating.

Pose & Lighting:

Apply a natural, subtle tilt + rotation in 3D to make it look like a floating product visualization.

Use soft, neutral global illumination and no shadows under the object.

No extra props, no text, no labels unless explicitly requested.

Prompts

Magazine:

A photo of a glossy magazine cover, the cover has the large bold words "The World's Metal Man". The text is in a serif font, black on white, and fills the view. No other text.

In front of the text there is a dynamic portrait of the attached image as reference.

GENERAL STYLE & MOOD: Photorealistic, 8k, shallow depth of field, soft natural fill light + strong golden rim light. High dynamic range, calibrated color grading. Skin tones perfectly accurate. Crisp fabric detail with individual threads visible. Balanced composition, slightly wide-angle lens (35mm), center-weighted. Show the subject mid movement sliding over the hood of a car with his rifle out at the ready.

Put the issue number and today's date in the corner along with a barcode and a price. The magazine is on a white shelf against a wall.

Prompts

Soldier:

Create a hyper-realistic, ultra-sharp, full-color large-format image featuring a soldier standing at the bottom of the halfpipe wearing an experimental exosuit posing heroically. The exosuit is like the ones from Call of duty advanced warfare. The image must look like a perfectly photographed editorial cover with impeccable lighting, lifelike skin texture, micro-details of hair, pores, reflections, and fabric fibers.

GENERAL STYLE & MOOD: Photorealistic, 8k, shallow depth of field, soft natural fill light + strong golden rim light. High dynamic range, calibrated color grading. Skin tones perfectly accurate. Crisp fabric detail with individual threads visible. Balanced composition, slightly wide-angle lens (35mm), center-weighted. All celebrities interacting naturally, smiling, posing, or conversing. Minimal background noise, but with enough world-building to feel real.

THE ENVIRONMENT: A snowy base of a halfpipe with lights illuminating the background. Elements include: Warm golden light wrapping around silhouettes. Polished marble.

Prompts

Group Picture:

Create a hyper-realistic, ultra-sharp, full-color large-format image featuring those referenced in the attached images, all standing together in a single wide cinematic frame. The image must look like a perfectly photographed editorial cover with impeccable lighting, lifelike skin texture, micro-details of hair, pores, reflections, and fabric fibers.

GENERAL STYLE & MOOD: Photorealistic, 8k, shallow depth of field, soft natural fill light + strong golden rim light. High dynamic range, calibrated color grading. Skin tones are perfectly accurate. Crisp fabric detail with individual threads visible. Balanced composition, slightly wide-angle lens (35mm), center-weighted. All subjects interacting naturally, smiling, posing, or conversing. Minimal background noise, but with enough world-building to feel real.

THE ENVIRONMENT: A luxurious open-air rooftop terrace at sunset overlooking a modern city skyline. Elements include: Warm golden light wrapping around silhouettes. Polished marble.

Information Points:

Context: I am trying to generate a presentation to a bunch of college students and our marketing department. Our product is the Advanced Combative Exo (ACE) Suit, an attachable Exoskeleton meant to assist Armed Forces in their operations.

Objective: I want you to generate me some bullet points that you think would be worth mentioning to assist the armed forces (for instance, mention how the exosuit comes with a built-in chest rig for substantial protection against projectiles).

Style & Tone: Make the bullet points slightly more on the serious side, keeping it mature and straight to the point.

Audience: The audience is for aspiring technologists in the Military Sector, as well as the members of the U.S Armed forces.

Response: Try to keep the bullet points less than 20 words each, and generate me about 10 bullets I can pick from.

Logo:

Context/Objective: Generate me a company logo that is preferably the colors black and white. Our company name is "Shock & Awe Inc.",

Style: so maybe include some lightning/fast themes in the logo. This is awesome. Can you maybe slant the letters a bit more so the words look a bit more technological?

Tone/response: Below the company name, can you also insert a small slogan that says this: "Always Acting. Always Innovating. Always Forward."
